UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS
General Certificate of Education Ordinary Level

CANDIDATE NAME

CENTRE NUMBER | | | | | |

CANDIDATE NUMBER | | | | |

7280655710

CHEMISTRY **5070/02**

Paper 2 Theory **October/November 2008**

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials: Answer Booklet/Paper

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.
Write in dark blue or black pen.
You may use a soft pencil for any diagrams, graphs or rough working.
Do not use staples, paper clips, highlighters, glue or correction fluid.
DO **NOT** WRITE IN ANY BARCODES.

Section A
Answer **all** questions.
Write your answers in the spaces provided in the Question Paper.

Section B
Answer any **three** questions.
Write your answers on any lined pages and/or separate answer paper.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.
The number of marks is given in brackets [ ] at the end of each question or part question.

For Examiner's Use	
Section A	
B7	
B8	
B9	
B10	
Total	

This document consists of **20** printed pages.

	Fe	Co	Ni	Cu	Zn	Ga	Ge	As	Se	Br	Kr
										I	Xe

Answer these questions using **only** the elements shown in the diagram.

Each element can be used once, more than once or not at all.

Write the symbol for

(i) an element which is in Group 5 and Period 3, [1]

(ii) an element which is used as a gas in balloons, [1]

(iii) an element which forms ions in aqueous solution which give a white precipitate on reaction with aqueous silver nitrate, [1]

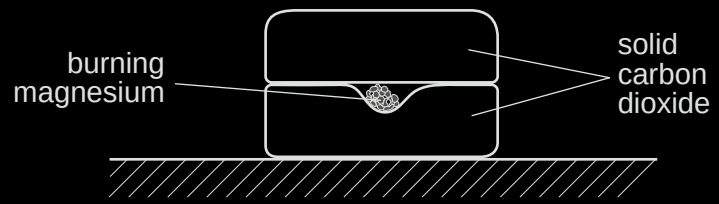

(iv) an element which forms an ion of type X^{3-}, [1]

(v) an element which is a catalyst for the hydrogenation of alkenes, [1]

(vi) two elements which combine to form a compound which causes acid rain. and [1]

[Total: 6]

A vigorous reaction is observed.

$$2Mg + CO_2 \longrightarrow 2MgO + C$$

(a) Suggest what could be seen as the reaction proceeds to completion.

.....

..... [2]

(b) Why is another block of solid carbon dioxide placed above the burning magnesium?

..... [1]

(c) State **one** factor in the experiment which slows down the reaction.

..... [1]

(d) When 2 moles of magnesium react with one mole of carbon dioxide, 810 kJ of energy are released.
Calculate the energy released when 2.0 g of magnesium reacts completely with carbon dioxide.

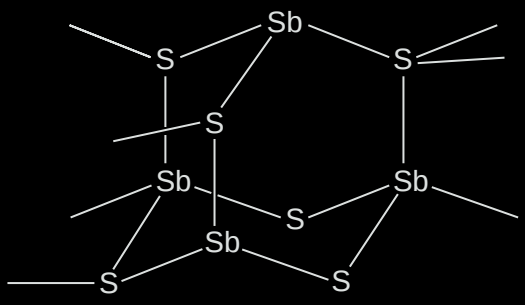

[2]

www.PapaCambridge.com

Deduce the empirical formula of antimony sulphide.

.....[1]

[Total: 6]

www.PapaCambridge.com

Describe and explain the change in pH from the surface to the centre of the beam.

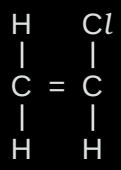

.....

.....

..... [3]

www.PapaCambridge.com

www.PapaCambridge.com

Chloroethene can be polymerised to form poly(chloroethene).
Draw a section of a poly(chloroethene) chain to show at least two repeating units.

[1]

(c) In the production of aluminium, sodium hydroxide is used to separate aluminium oxide from the impurities in the bauxite ore. The main impurity in the ore is iron(III) oxide. Aluminium oxide is an amphoteric oxide whilst iron(III) oxide is a basic oxide.
Suggest how these two oxides can be separated by the addition of aqueous sodium hydroxide.

(a) What do you understand by the term *electrolysis*? [1]

(b) The solution around the tip of the needle is mainly a dilute aqueous solution of sodium chloride.

www.PapaCambridge.com

lactic acid

Lactic acid reacts with ethanol to form an ester.

(i) State the conditions needed to form an ester. [2]

(ii) Draw the structure of the ester produced by the reaction of lactic acid with ethanol. [1]
